Business Solutions Installation Guide

Kontineo Business Solutions Installation Guide

The Kontineo Business Solutions Installation guide, documents how to install a Kontineo Business Solution.

Kontineo Licence Administration

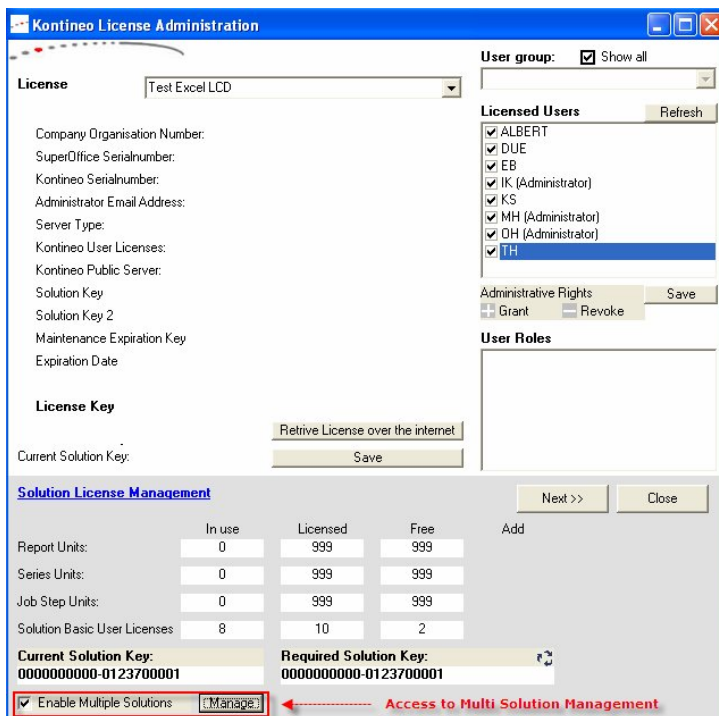

Before you can download and License a KONTINEO® Business Solutions, you need to install the KONTINEO® 2006 software platform and Activate the software with a license key. To do this, please follow the Kontineo 2006 quick installation guide. You can download the installation file directly from www.kontineo.com/download/kontineo2006install.exe.

To download a Kontineo Solution, select License Management under Administration -> Advanced -> License Management

Note: Only administrators have access to the Administrations menu.

The first screen picture that you see is the Kontineo license Administration.

At the bottom of the page, you will find the button 'Manage' that will take you to the Multi Solution management. Please remember to mark the 'Enable Multiple Solutions' button before pressing the Manage button.

Kontineo Multi Solution Management

On the top part of the side, you can see all existing Kontineo Solutions that have been added to SuperOffice preferences as registered solutions.

Explanations:

Native Solution name

The name used when Licensing a Solution – and the name of the solutions folder.

Public Solution Name

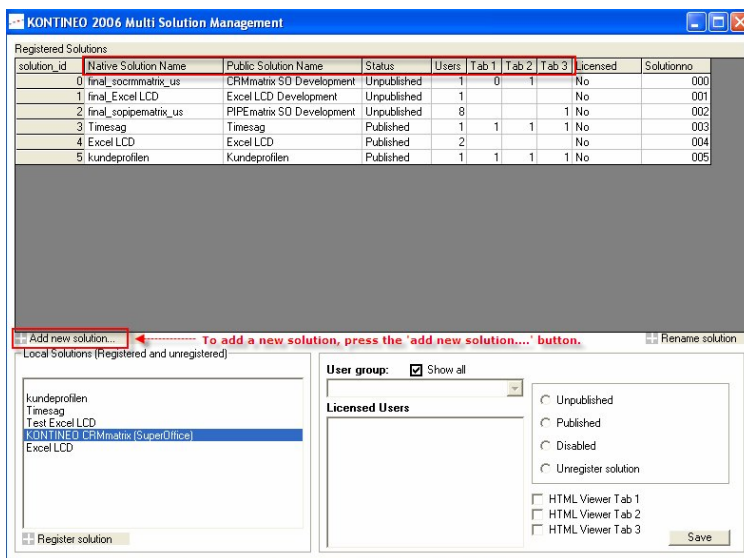

The name that appear in the user interface

Status

When published, the Solution will appear in menu for users. Unpublished solutions will appear for Administrators.

Users

Users whom have been granted user license for the solution.

Licensing Note: When the Main License has an Expiration date, Administrators can work on unlicensed Solutions. When a permanent Main License is made permanent, unlicensed solutions cannot be used, and only users with user license for the specific solution can use it.

'Tab' columns

The three 'Tab' columns tells you in which HTML View Tabs the solution will appear in.

Tabs Note: When 'Enable Multi Solutions' is ticked, registered published solutions will appear in the menu of the Kontineo Front Panel, and if HTML Views Tabs are ticked, also in the solutions menu in Cockpit and other uses of Kontineo HTML Viewers. The Tab number refers to Tab Accessibility in the Report Designer in Group Management, and to kontinehtmlviewer.html files:

Tab 1: Kontinehtmlviewer.html (This tab does not support solutions. It is normally used as Contact Archive Tab)
Kontinehtmlviewer5.html

Tab 2: Kontinehtmlviewer2.html (First Cockpit version - Unsupported for after SR4)
Kontinehtmlviewer4.html (Cockpit that with SR4 replaces Kontinehtmlviewer2.html)

Tab 3: Kontinehtmlviewer3.html (Cockpit layout 2)

Add new solution

When you want to add a new solution to your current solution, just click the 'Add new solution' button.

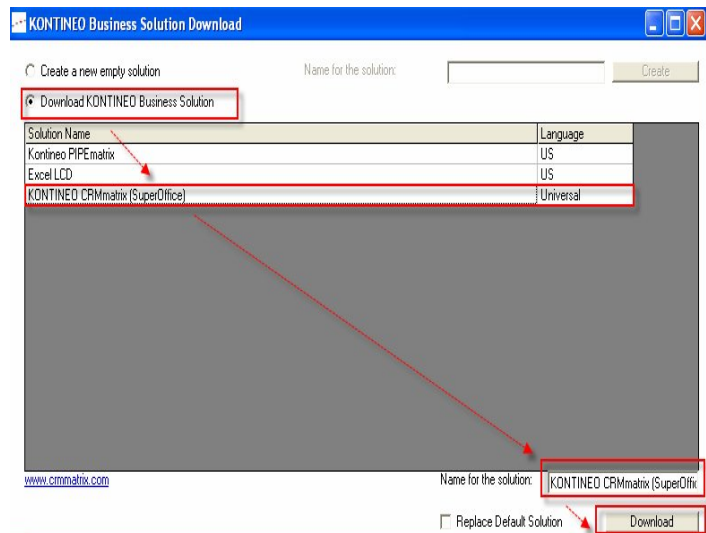

Business Solution Download

When you enter the Business Solution Download screen, you first mark the 'Download KONTINEO Business Solution'.

Under 'Solution Name' you mark the solution that you want to download.

When the solution is marked, you can see the name in the 'Name for the Solution' field. You can give it a custom name. (This will be the Native Name – you can afterwards register the solution and change the display name)

Click 'Download' to download the solution.

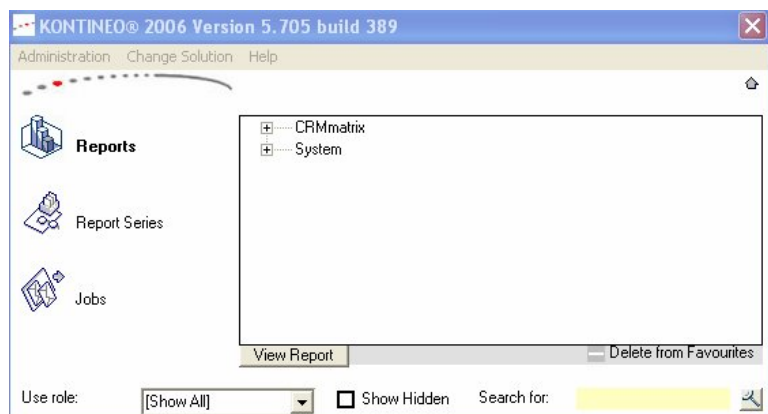

When the download is finished, Kontineo may ask you whether you want to open web page related to the solution (Not applicable to all solutions).

Kontineo will now reset the solution to your systems environment (Load users, examine SuperOffice user defined fields, etc.) and will then go back to the Front Panel with the solution being active.

From here you should configure the solution if applicable (refer to documentation on the individual solution).

You may also want to configure Security Management and other general configurations.

After this you should register the solution to be available for users (See previous page) – then license the solution (currently you need to contact Kontineo – in the near future authorized partners will be given access to generate license keys) and finally publish the solution.
